

Innovala Kwik Fix Damper for cabinet and furniture doors was designed to work with every single face frame or frame-less hinge on the market. The unique manual adjustment wheel allows the damper to adapt for any hinge closing strength and door size and weight. Pre-mounted behind the indexing tab on the damper base is a hi-lo thread, Pozi-drive wood screw for a quick, easy and secure installation.

Box qty	400 in bulk with 4 boxes of 100 pieces
Item #	KF-1003NP
Box qty	300 individually in a poly bag with instructions

Innovala Uni Fix Damper developed to meet the requirements of RTA furniture and the retail market. Any existing or new hinged furniture or cabinet door can be upgraded easily to a damped door. Place the L-shaped Uni Fix Damper housing on the bottom of your face or frame-less cabinet. By closing the door the damper housing will stay in place and allow you to move it right or left to find the right position. Measure the distance from the hinge side edge of your cabinet then move the damper to the same position at the top of the cabinet and fix in place with the supplied nail.

Uni Fix Damper

- Polymer housing
- Easy installation with a simple included nail
